Biología celular y molecular lodish pdf gratis. Biología celular y molecular lodish 7ma edición pdf descargar gratis. Biología celular y molecular lodish 7ma

This site uses cookies, both proprietary and third party, to improve your browsing experience. If you continue to sail, we consider that you accept their use. To learn more about Part 36x Chemical and molecular foundations 1 Molecules, cells and evolution 1.1 Life molecules 1.2 Genomes, Architecture and cellular function 1.3 From cells to tissues: unicellular organisms and metazos are used for research into molecular cellular biology 2.1 Chemical foundations 2.1 Covalent bonds and non-covalent interactions 2.2 Chemical monomer units of cells 2.3 Chemical reactions and chemical balance 2.4 Energy Biochemistry 3.3 Protein structure and function 3.1 Protein hierarchy 3.2 Protein folding 3.3 Protein union and enzyme catalysis 3.4 Protein function regulation 3.5 Purification, Identification and characterisation of protein 3.6 Proteomic Part II Genetics and molecular biology 4.1 Molecular genetic mechanisms 4.2 Transcription of genes coding proteins and formation of functional mRNA 4.3 Decoding of mRNA by tRNA 4.4 Protein step synthesis Replication of DNA 4.6 Repair and recombination of DNA 4.7 Virus: parasites of the cellular genetic system 5.5 Molecular genetics techniques 5.1 Genetic analysis of mutations for the identification and study of genes 5.2 Cloning and characterization of DNA 5.3 Use of cloned DNA fragments to study Genetic expression 5.4 Location and identification of genes of human diseases 5.5 Inactivation of the function of specific genes in eucarions 6 genes, genomics and chromosomes 6.1 Genetic structure eucariontes 6.2 Chromosome organization of genes and non-coding DNA 6.3 Transferable DNA elements (mobile) 6.4 DNA elements 6.5 Genesis: In-depth analysis of the genome of the structure and the gene expression 6.6 Structural organization of eucaronti chromosomes 6.7 Morphology and functional elements of eucaronti chromosomes 7 Transcriptional control of the gene expression in bacteria 7.2 Overview of genetic control in eucaronti 7.3 promoters and general transcription factors of the RNA polymerase II 7.4 regulatory sequences in the genes coding the proteins and proteins through which 7.5 molecular mechanisms of replication adjustment of the activity of transcription factors 7.7 Epigenetic adjustment of transcription 7.8 Other transcription systems Eucariontes 8 Post-translation genetic control 8.1 Processes Organization of the pre-MRNA eucarionte 8.2 Adjustment of the preparation of the pre-mRNA 8.3 Transportation of the mRNA through the nuclear coating 8.4 Mechanisms of post-transcriptional control cytoplasmic mechanisms 8.5 Processing of the RRNA and the TRNA Part III Structure and mobile function 9 Cultivation, visualization and perturbation of cells 9.1 Collect cell growth 9.2 Optical microscopy: Examination of cellular structures and display of proteins at the inside of cells 9.3 Electronic microscopy : High resolution image 9.4 Insulation and characterization of cellular organs 9.5 Function disorders Specifications 10 Structure of biomembrane 10.1 Lipid bike: Composition and structural organization 10.2 Membrane protein: Structure and functions B 10.3 phospholipids, spikopids and cholesterol: synthesis and intracellular movement 11 Transportation of ions and small molecules through the membrane 11.1 Generalet of Transmembrining Transport 11.2 Facilitated transport of glucose and water 11.3 Pumps operated by ATP and Iranian intracellular environment 11.4 Itineraries without a hatch and potential of a rest membrane 11.5. Cotrasporto by sympathisers and anticarriers 11.6 Transcellular transport 12.1 Cellular energy 12.2 Mitochondria and citric acid cycle 12.3 Chain of electron transport and power generation Protein 12.4 Use of protein strength to synthesize ATP 12.5 Photosynthesis and pigments that absorb light 12.6 Molecular analysis of photosystems 12.7 CO₂ metabolism during photosynthesis 13.1 Protein movement 13.1 Protein direction to the membrane of the RE and through membrane 13.2 membrane proteins within the RE 13.3 Modifications, bending and quality control of proteins within the RE 13.4 Protein address to myth 13.5 Protein address to peroxysomes 13.6 Internal and external transport of nucleus 14 Transit, secretion and vesicular endocytosis 14.1. Techniques for the study of secretory pathway 14.2 Molecular mechanisms of formation Fusion of vesicles 14.3 Initial steps of secretory pathway 14.4 Final steps of secretory pathway 14.5 Endocytosis mediated by receptor 14.6 Address of membrane proteins and cytosolic materials to lysosome 15.2 Transmission of signal receptors coupled to protein G 15.1 Transmission of signal: from extracellular signal to cellular response 15.2 Study of surface receptors of cells and signal transduction proteins 15.3 Receptors coupled to protein G: structure and mechanism 15.4 Receptors coupled to cell surface receptors Protein G receptors coupled to protein G that regulate the initial channels 15.5 receptors coupled to protein G that activate or inhibit adenyl cyclase 15.6 receptors coupled to protein G that cause increases in Ca²⁺ 173; Sections 177; realisation19555; Hello? 175555556; 17355555555555555555Las serina-cinasas receptor as that activated Smad 16.5 V 173as of realization controlled by ubicuitinacia195; N: Wnt, Hedgehog y NF-kB 16.6 to 173; those of se195; 177? controlled by protein secretion: Notch/Delta, SREBP 16.7 Integragra7 179; n of their respective forests to m195; a19555; 555?
